WHAT IS CLAIMED IS:

- 1. A system for real-time, communication between a plurality of separated users, comprising
 - (a) at least one communication device for use by each of the plurality of users and having an associated display;
 - (b) at least one communication network to which at least first and second users can connect by logging in at their respective communication devices;
 - (c) at least one service record for the first and second logged in users, the at least one service record including user identification information and an associated location where each user is logged in no matter where they are located;
 - (d) computer software for
 - (i) causing display of a user identifier for at least the second user on the display of at least the first user's communication device, and
 - (ii) generating a signal in response to a first user selecting the displayed second user's identifier; and
 - (e) collaboration initiation software that functions
 - (i) to cause the retrieving of necessary addressing information of the second user, and
 - to cause the establishing of a connection between the first and second users, and thereby
 - (iii) to enable real-time communication displayed on the display of the first and second users.
- 2. The system of claim 1, wherein the communication includes real-time text messages displayed on the displays associated with the first and second users.
- 3. The system of claim 2, wherein at least one communication device can be a wireless device.
- 4. The system of claim 2, wherein the communication network can be a wide area network.
- 5. The system of claim 1, wherein the user identifier can be in a personalized list.
- 6. The system of claim 5, wherein at least one identifier can be a graphical icon representing a user.

- 7. The system of claim 6, wherein the system is configured to indicate to a user whether another user is not logged in.
- 8. The system of claim 2, wherein the system is configured to allow the first user to:
 - (a) select a new user from among a plurality of potential users; and
 - (b) add that new user to an existing communication.
- 9. The system of claim 2, wherein the system is configured to:
 - (a) detect an attempt by a third user to initiate a communication with the first user;
 - (b) notify the first user of the attempt; and
 - (c) allow the first user to establish a communication with the third user.
- 10. The system of claim 9, wherein the system is configured to cause the attempt to initiate communications to appear automatically on a user's display.
- 11. The system of claim 2, wherein the system is configured to
 - (a) allow the first user to send an e-mail to the second user.
- 12. The system of claim 2, wherein the communication can include at least one picture image.
- 13. The system of claim 2, wherein the communications can include video images of at least one participant.
- 14. A system for real-time, communication between a plurality of separated users, comprising
 - at least one communication device for use by each of the plurality of users and having an associated display;
 - (b) at least one communication network to which at least first and second users can connect by logging in at their respective communication devices;
 - (c) at least one service record for the first and second logged in users, the at least one service record including user identification information and an associated location where each user is logged in;
 - (d) computer software for
 - (i) causing display of a user identifier for at least the second user in a personalized list on the display of at least the first user's communication device, and

- (ii) generating a signal in response to a first user selecting the displayed second user's identifier; and
- (e) collaboration initiation software that functions
 - (i) to cause the retrieving of necessary addressing information of the second user, and
 - to cause the establishing of a connection between the first and second users, and thereby
 - (iii) to enable real-time communication displayed on the display of the first and second users.
- 15. The system of claim 14, wherein the personalized list can include at least one graphical icon representing a user.
- 16. The system of claim 14, wherein the system is configured to indicate to a user whether another user is not logged in.
- 17. The system of claim 16, wherein the service records further include a location where each user is logged in no matter where they are located.
- 18. The system of claim 16, wherein the communication can include real-time text messages displayed on the displays associated with the first and second users.
- 19. The system of claim 18, wherein at least one communication device can be a wireless device.
- 20. The system of claim 19, wherein the communication network can be a wide area network.
- 21. The system of claim 18, wherein the system is configured to allow the first user to:
 - (a) select a new user from among a plurality of potential users; and
 - (b) add that new user to an existing communication.
- 22. The system of claim 18, wherein the system is configured to:
 - (a) detect an attempt by a third user to initiate a communication with the first user;
 - (b) notify the first user of the attempt; and
 - (c) allow the first user to establish a communication with the third user.
- 23. The system of claim 16, wherein a user can be selected by clicking on an icon.

- 24. The system of claim 16, wherein users can indicate they want to accept incoming communications.
- 25. The system of claim 22, wherein the system is configured to cause the attempt to initiate communications to appear automatically on a user's display.
- 26. The system of claim 16, wherein the system is configured to
 - (a) allow the first user to send an e-mail to the second user.
- 27. The system of claim 16, wherein the communication can include at least one picture image.
- 28. The system of claim 17, wherein the communications can include video images of at least one participant.
- 29. A system for real-time, communication between a plurality of separated users, comprising
 - (a) at least one communication device for use by each of the plurality of users, at least one device being a wireless device and device having an associated display;
 - (b) at least one communication network to which at least first and second users can connect by logging in at their respective communication devices;
 - (c) at least one service record for the first and second logged in users, the at least one service record including user identification information and an associated location where each user is logged in no matter where they are located;
 - (d) computer software for
 - (i) causing display of a user identifier for at least the second user in a personalized list on the display of at least the first user's communication device, and
 - (ii) generating a signal in response to a first user selecting the displayed second user's identifier; and
 - (e) collaboration initiation software that functions
 - (i) to cause the retrieving of necessary addressing information of the second user, and
 - (ii) to cause the establishing of a connection between the first and second users, and thereby

- (iii) to enable real-time communication displayed on the display of the first and second users.
- 30. The system of claim 29, wherein the communication can include real-time text messages displayed on the displays associated with the first and second users.
- 31. The system of claim 30, wherein the personalized list can include graphical representations of users and is scrollable.
- 32. The system of claim 31, wherein the system is configured to indicate to a user whether another user is not logged in.
- 33. The system of claim 32, wherein the system is configured to allow the first user to:
 - (a) select a new user from among a plurality of potential users; and
 - (b) add that new user to an existing communication.
- 34. The system of claim 30, wherein the system is configured to:
 - (a) detect an attempt by a third user to initiate a communication with the first user;
 - (b) notify the first user of the attempt; and
 - (c) allow the first user to establish a communication with the third user.
- 35. The system of claim 34, wherein the system is configured to cause the attempt to initiate communications to appear automatically on a user's display.
- 36. The system of claim 30, wherein the communications can include video images of at least one participant.
